

Solar panels on our school. Sign petition!
Marching for the climate to demand a sustainable future helps, and local action does too. Sign our petition for our school to go solar!

We just need to get on and do it!

Azhar Academy Girls School could host 291 solar panels (80 kW), which would:*

Generate 74,392 kWh of clean solar electricity per year.

Stop 29 tonnes of CO₂ from ever entering the atmosphere which is equal to planting 31 trees.

Save the school £94,484 over the next 25 years without investing anything!

*Figures are calculated using the Solar for Schools website and are based on available data at the time. You can change the design & improve the accuracy of results in the Analysis section of the project page for this school at www.solarforschools.co.uk

Petition to obtain solar panels

By signing this petition we are showing our Headteacher how much we care about climate change. Solar for Schools can then help our school go solar at no cost or risk and then provide us with energy literacy and climate change education. Sign up now!
