

Solar panels on our school. Sign petition!

Marching for the climate to demand a sustainable future helps, and local action does too. Sign our petition for our school to go solar!

We just need to get on and do it!

Kay Rowe Children's Centre could host, 145 solar panels with 40kW, which would:*

Generate 37,196 kWh of clean solar electricity per year.

Stop 14 tonnes of CO2 from ever entering the atmosphere which is equal to planting 16 trees.

Save the school £ 24,195 over the next 25 years without investing anything!

*Figures are calculated using the Solar for Schools website and are based on available data at the time. You can change the design & improve the accuracy of results in the Analysis section of the project page for this school at www.solarforschools.co.uk
