

Solar panels on our school. Sign petition!
Marching for the climate to demand a sustainable future helps, and local action does too. Sign our petition for our school to go solar!

We just need to get on and do it!
Lister Community School could host 800 solar panels (220 kW), which would:*

Generate 204,952 kWh of clean solar electricity per year.

Stop 79 tonnes of CO2 from ever entering the atmosphere which is equal to planting 87 trees.

Save the school £378,058 over the next 25 years without investing anything!

*Figures are calculated using the Solar for Schools website and are based on available data at the time. You can change the design & improve the accuracy of results in the Analysis section of the project page for this school at www.solarforschools.co.uk

Petition to obtain solar panels
