

Solar panels on our school. Sign petition!
Marching for the climate to demand a sustainable future helps, and local action does too. Sign our petition for our school to go solar!

We just need to get on and do it!

Ysgol Gyfun Cwm Rhymni could host 145 solar panels (40 kW), which would:*

Generate 35,122 kWh of clean solar electricity per year.

Stop 13 tonnes of CO₂ from ever entering the atmosphere which is equal to planting 15 trees.

Save the school £16,110 over the next 25 years without investing anything!

*Figures are calculated using the Solar for Schools website and are based on available data at the time. You can change the design & improve the accuracy of results in the Analysis section of the project page for this school at www.solarforschools.co.uk
